

Ca218/119 Lab 4 (Oct 24th)

Q1. Using the 'sakila' database, list the names, release year, category and description of all films that are rated G.

Q2. Using the 'world' schema, print out the names of all spoken languages which have more than 1,000,000 speakers. Ordered by the number of people who speak them, from most to least.

Q3. Using the 'sakila' database find the full names of all customers who spent more on a single payment than any customer with the first name 'Mary'.

Use classicmodel schema:

Q4. Find what first names are in common between the customers table in the classicmodel schema and the customer table in the sakila schema. Hint: to use the sakila schema while setting the classicmodel schema as default, refer to any of the sakila tables as sakila.[table] in the query.
